

**Thomas Bachellerie**

Program Manager - Digital Manufacturing

I started as a numerical simulation engineer for the Aerospace industry, then moved to product engineering methods and tools before switching to product design and PLM processes. After 9 years on the product side, I decided to move to manufacturing where my experience in digital transformation would fit perfectly to the current age of Industry 4.0 and the adaptation of the PLM paradigm to the Digital Manufacturing thread. I acted as R&T leader for 3 years with an Indian pure player before joining Capgemini where I am now supporting both key programs for our customers as well as offer and business development.
