Mourad Chohra

Project Manager - Composites Materials and Processes

Mourad Chohra has been working on the development of structural technologies and their implementation in new aircraft program for 15 years at Dassault Aviation. He has contributed to various composites and assembly technologies on nEUROn, Falcon 6X and current ongoing development Falcon 10X. In parallel, Mourad has also represented Dassault Aviation in various cooperation developments project (European, national...).

He is currently in charge of innovation in production and new industrial processes developments in various fields (metallic, composites, assembly, additive manufacturing etc...).
